To be eligible for home oxygen, Veterans must have a documented SpO2 reading on room air of 88% or less at rest or with exercise.

Documentation should be faxed to (918) 577-3957, Mon-Fri, 8am-4pm or to the Veteran’s Primary Care team who must scan the documentation and place orders, as appropriate.

Testing should be done no more than 48 hours before discharge when the Veteran is closer to baseline. Once this information is received a consult will be ordered for approval and signature for set up.

VAMC must fax consults to our oxygen vendor before 3pm M-F for same-day set up. If oxygen is required after hours or on weekends or holidays, the order by VAMC must be entered as STAT to ensure same day set-up. **For weekend or holiday set-up, orders should be faxed to VAMC before 3pm on Friday whenever possible.**

As always, advance notice is preferred to ensure appropriate transition of care.
